

# Bromine Compounds

This one-pager provides a concise overview of Sostie's core product family, including representative CAS numbers and brief application-focused descriptions. It is designed to give a clear snapshot of our sourcing scope, product expertise, and the types of chemicals we supply across nutraceutical, food, pharmaceutical, and industrial markets. Should you require a product not listed in this one-pager, please contact us at the email address below.

## Products and Descriptions

N-Propylbromide CAS 106-94-5	an alkyl bromide used as a reagent and intermediate in organic synthesis. It is commonly applied in alkylation reactions and in the preparation of pharmaceuticals, agrochemicals, and specialty chemicals.
N-Butylbromide CAS 109-65-9	an alkyl bromide widely used as a reagent and intermediate in organic synthesis. It is commonly applied in alkylation and substitution reactions for pharmaceutical, agrochemical, and fine chemical manufacturing.
Hydrobromic Acid (48%) CAS 10035-10-6	a strong inorganic acid widely used in organic synthesis and chemical manufacturing. It is commonly applied in bromination, salt formation, and cleavage reactions in pharmaceutical and industrial processes.
Lauryl Bromide CAS 143-15-7	a long-chain alkyl bromide used as an intermediate in organic synthesis and surfactant production. It is commonly applied in alkylation reactions for pharmaceutical, cosmetic, and specialty chemical applications.
1,6 Dibromohexane CAS 629-03-8	a bifunctional alkylating agent used in organic synthesis. It serves as a versatile linker and intermediate in the preparation of pharmaceuticals, polymers, and specialty chemicals.
